

PROTEIN BASED LOOSE LICKS FOR CATTLE IN THE Paddock

For enhancing livestock production on dry, mature pastures.

Top Country offers a range of supplements designed for cattle grazing dry pastures where protein is the most limiting nutrient and increased minerals are not required for production purposes. Supplements consist of high-quality ingredients with a combination of fast break-down proteins (urea & gran-am) and slow-breakdown protein meals to assist cattle with digestion of dry pastures. Each of these supplements also contains a balance of minerals to reduce the risk of deficiencies and ensure requirements for maintenance are met.

- ✔ Cost-effective solution to increase productivity and alleviate nutritional deficiencies
- ✔ Improving pasture utilisation by increasing dry matter intake by up to 30%
- ✔ Ability to fully customise supplements to achieve consistent daily intakes of 200-300g
- ✔ Urea is increased in safe and steady increments to reduce the risk of poisoning

PRODUCT	SUITABILITY	SALT (%)	UREA (%)	PHOSPHORUS (%)	CALCIUM (%)	SULPHUR (%)	PROTEIN (CP) (%)
Top Start	Safe introduction to dry lick where protein is limited	00-20	5	1	4	1.4	34-53
Top Season	Best fed to dry cows, weaners (>300kg LW), steers & bulls after using a Top Start	00-20	10	1	4	1.4	52-66
Top Link	Best fed on dry standing mature pasture; when manure is tightening up	00-20	15	1	4	1.4	64-79

PROTEIN & MINERAL BASED LOOSE LICKS FOR BREEDING STOCK

For enhancing livestock production on phos deficient, dry pastures.

Top Country offers supplements containing 3% phosphorus and 6% calcium to meet the requirements of pregnant and lactating stock grazing on deficient country. The balance of minerals ensures that the optimum levels are absorbed and used for maintenance, milk production, fertility and growth. The increased mineral composition of this range, compared to the standard dry season range, means that the XP supplements are less palatable thus consumptions of 200-300g/head/day are achievable when fed under the right circumstances.

- ☑ Increase production and alleviate nutritional deficiencies in a cost-effective manner
- ☑ Supplementation can increase dry matter intake by up to 30% which improves pasture utilisation
- ☑ Also suitable for weaners (live weight > 200kg), maiden & second-calf heifers & bulls
- ☑ Urea is increased in safe and steady increments to reduce the risk of poisoning

PRODUCT	SUITABILITY	SALT (%)	UREA (%)	PHOSPHORUS (%)	CALCIUM (%)	SULPHUR (%)	PROTEIN (CP) (%)
Top Start XP	Safe introduction to dry lick where protein/phos is limited	00-20	5	3	6	1.4	36-50
Top Season XP	Best fed to lactating cows, weaners (>300kg LW), steers & bulls after using a Top Start	00-20	10	3	6	1.4	49-62
Top Link XP	Best fed on dry standing mature pasture; when manure is tightening up	00-20	15	3	6	1.4	62-76
