

TOP EQ RANGE

Let your horses feed themselves

The nutritional plane of horses can be improved at any time of the year by identifying and supplementing the most limiting nutrients for pregnancy, lactation, growth, or workload. Top Country has a select range of dry loose lick horse supplements purposely formulated to sustain horses dietary mineral and protein requirements. The Top EQ range of supplements contain numerous high quality protein sources, primarily copra meal with additional cottonseed meal, to ensure that the animal remains in pristine condition.

☑ **Top EQ**

is a loose lick supplement that has been designed for horses grazing dry standing pasture. Pastures are most limiting generally after the first few frosts, and the protein and energy levels in the feed drop dramatically. Top EQ is designed to correct those deficiencies, maintaining a healthy diet, and meeting the animal's vitamin and mineral requirements.

☑ **Top EQ CALPHOS**

is a moderately concentrated protein and mineral loose lick designed for horses grazing a mixture of Tropical and Native grasses, that may still be prone to Big-Head. It is also a fantastic transitional supplement, when pastures begin to hay off and the calcium requirements are not as high when tropical grasses are in the active growing phase.

☑ **Top EQ TROPICAL**

is a highly concentrated vitamin and mineral loose lick. It is suited to horses grazing either lush green or a majority of tropical grasses (Buffel, Setaria, Green Panic). This product is commonly known as our 'Big Head Lick'.

☑ **Top EQ PREMIUM PROTECT**

is a high calcium premium mineral supplement for horses, specifically formulated to combat the effects of Big Head in horses in regions predominantly prone to this condition. The high calcium premium and phosphorus content in this supplement allow horses to meet their mineral requirements on pastures with a low daily intake.
